

## Sustainability Policy Statement

---

At the core of sustainability is the concept of reduce, reuse and recycle. This core philosophy is the basis upon which the Elliott Business Model operates.

Our business provides buildings which when they are no longer needed can be relocated to a new destination and reused. Thereby eliminating much of the waste associated with traditional fixed building structures.

Through the introduction of lean work methods and workplaces Elliott has introduced a process of continuous improvement which constantly seeks to use less natural resource, increase the reuse of materials and only store or move what is needed when it is needed and thereby reduce our impact on the environment and our neighbours.

The *Algeco Way* is our cultural operating system designed to embed good neighbourliness, protection of the environment and respect for people into a system that delivers products which continuously build quality in and take waste out.

In this way Elliott is developing a process that addresses the three pillars of sustainability: Social, Environment and Economic.

***Our goal is to change the paradigm of our industry from wasteful to methods to a supply chain where customers specify sustainable products and our suppliers manage and reduce their impacts throughout the supply chain.***

For and on behalf of Elliott Group Ltd

Mr Luke Staton  
Operations Director

November 2018

The Directors will review and revise the policy statement regularly.
